

QA Summary Report

Manual test session — annotated screenshots

Summary

Issues identified during a manual test session across the app (Home, Shop, Global League, Profile, Customization, Private League creation screens). Two recurring root causes stand out:

- Untranslated text or broken i18n keys (item 1) — likely an incomplete translation pass on the studio side.
- Parity gaps between Global League and Private League (items 4, 5) — features built for the private league were not replicated on the global league screen.
- Wrong asset pool in use (items 7, 8) — incorrect or incomplete ID/asset mapping on the customization screens.

1. Home — Untranslated / broken text when empty

Priority: Medium

Final validated copy to integrate:

No games tonight 🏀

No league yet... come challenge your friends 🥊

Action: replace the broken/English i18n keys (noMatchesToday, No leagues joined yet) with this FR copy, and provide the EN equivalent above. Fix the i18n binding itself, not just the displayed text.

2. Shop — Token top-up page unreachable

Priority: High

There is no way to reach a token top-up screen from the Shop. The balance shown at the top (6 tokens) has no entry point to get more.

Action: check with the studio why the top-up page isn't accessible/visible right now, and confirm it will be in place before launch.

3. Shop — Live Scoring: text and price out of sync

Priority: Medium

The live score feature was modified a while back because it was running too far behind — ad removal was set aside at that point, and is therefore no longer part of the offer for now. The Shop copy ("Live - Scoring + No Ads" / "Real-time & ad-free") and the displayed price (450 tokens/Year) still reflect the old model, from before that change.

Action: update the copy to "Live Scoring" / "Follow your players in real time" (no ad mention), and correct the price to reflect the new model (200 tokens/month).

4. Global League — "Bonuses" button shown by mistake

Priority: High

The Global League runs on the no-bonus duel engine (unlike private leagues: Luxury Tax, Chef Curry, 6th Man). The "+ Bonuses" button still shows up on the team composition screen in the Global League.

Action: hide the button conditionally on league type. Also verify server-side that applying a bonus is rejected in the Global League, even if the button remains clickable by mistake.

5. Global League — "Team confirmed" badge missing

Priority: High

As validated in the Figma v0, a green confirmation badge should appear once the team is complete and validated. It is implemented and working in the Private League, but missing in the Global League during testing.

Action: replicate the visual state on the Global League screen. Run a full parity audit between both composition screens (confirmed, locked, over budget, bonus, etc.) rather than fixing issues one by one.

6. Profile — Trophies: event logic to confirm

Priority: Medium

Breakdown of the 4 trophies and their trigger condition:

Gold — Wings

Duel league victory

Silver — Ball

Weekly Global League
victory

Diamond

Monthly Global League
victory

Orange L

Last place in a duel league

Action: confirm that each of the 4 counters is properly incremented server-side at the moment of the matching event above (not a static/hardcoded value), and test under real conditions that each counter actually updates.

7. Customization — Jersey selection: missing designs

Priority: High

6 jersey designs exist in total:

Yet the in-app screen only shows 5 tiles total, with the FLOWER #21 jersey duplicated in slots 2 and 5:

Result: the **SNAKE** and **ZEBRA** designs are never reachable by players — they don't appear anywhere in the current picker.

Action: the selection grid only has 5 slots when it needs 6 — add a 6th slot to the grid, then fix the ID → asset mapping so each of the 6 designs (DEVIL, FLOWER, UFO, SHARK, SNAKE, ZEBRA) is unique and properly referenced, with no duplicates.

8. Private League creation — Select Logo: wrong asset pool

Priority: Medium

Currently — the icons shown on the "Select Logo" screen (devil, flower, ufo, shark, snake, zebra) are indeed the player jersey mascots — wrong asset pool, needs replacing:

What I want — the dedicated league logo set below, distinct from the player mascots, to be integrated in place of this pool.

Heads up: 7 logos are provided here, but the current "Select Logo" screen only has 6 visible slots (3x2 grid) — the same kind of issue as the jersey picker (item 7). To clarify with the studio: either expand the grid to 7 slots, or confirm which of the 7 logos should be excluded.

Action: hand this set to the studio to replace the current pool (player mascots), fix the binding to point to this dedicated league collection, adjust the grid to the right slot count, and translate "Select Logo" to FR/EN.

Process note

Items 4 and 5 (Global League / Private League parity) should be grouped into a single ticket for the studio: "Global vs Private League functional parity", with a checklist of every visual state on the composition screen (confirmed, locked, over budget, bonus, etc.) rather than two isolated bugs.

Text/i18n fixes (items 1, 3) can be grouped into a single FR/EN proofreading pass rather than handled separately.
